Selling

51 Red Angus Bulls | 2 Red Sim-Angus Bulls | 12 Black Angus Bulls
1 Donor Cow | 5 Bred Heifers | 3 Packages of Embryos

RED ANGUS • BLACK ANGUS • SIM-ANGUS

MONDAY, FEBRUARY 26, 2024 • 2 PM MST

At our sale facility in Meadow, South Dakota

Welcome!

Fellow Cattle Producers,

Welcome to our 12th Annual Sale! While it seems like 2023 went by relatively quickly, overall it was a good year with a little more moisture for grass and hay production. We also experienced a strong cattle market and look forward to more good years ahead.

We believe it is our responsibility to provide our commercial customers with sound profitable genetics, and are proud of the seedstock we are presenting today for your consideration. Our bulls were once again developed at home on their 25 acre pasture. Our development strategy insures soundness and good hardened feet. It doesn't matter if it's the best numbered performance bull in the breed, if he doesn't stand on good feet, the rest doesn't matter. We feel like we are striking the right balance with a moderate rate of gain and plenty of exercise so the bulls we offer can provide our customers with a longer service life.

As always we continue to provide you with reliable data you need to make the best selections for your breeding program. To insure we have the best data available, all of the sale cattle have been DNA tested to provide genomic enhanced EPDS and verified parentage.

We invite everyone to view the cattle at our ranch prior to the sale or to contact us anytime to discuss which lots will work best in your program. Please don't hesitate to call with questions!

Thank you for your interest,

Brad Schecher

ABSENTEE BIDS:

> Internet Bidding:

Phone Bidding:
If you wish to bid
on the phone you
may contact Brad
or any of the sale staff to discuss different options.

We will contact any successful absentee bidders the day after the bull sale for purchase conformation and delivery arrangements.

This sale will be broadcast live on the internet.

www.dvauction.com

> ANNOUNCEMENTS:

Announcements from the auction block will take precedence over any information contained in this catalog

> VIDEO:

A video of each lot offered in the sale will be available at
www.dvauction.com

> SUPPLEMENT SHEET:

A supplement sheet will be available including actual scrotal measurements and updated information the week before the sale.

> BREEDING SOUNDNESS EXAM:

All bulls sell as guaranteed breeders. The bulls will be examined by West River Veterinary Clinic, prior to the sale, to determine they are developing correctly for their age. We highly recommend you have these bulls tested closer to your turnout time. We guarantee they pass a fertility test by turnout time.

> TWO YEAR BREEDING GUARANTEE:

We guarantee all of our bulls to be fertile and sound for their first TWO breeding seasons. This guarantee does not cover death and is void if improper management is apparent.

- Year one through October 1st 2024: We will provide a back-up bull or credit the full cost of the bull minus salvage value to the next years sale.
 - o Example: You pay \$5,000 for a bull and an injury occurs. He pounds out for \$1200. You would receive a \$3800 credit.
- Year two, Oct 1st 2024 through Oct. 1st 2025: One-third of the full cost of the bull minus salvage value will be credited toward the next years sale.
 - o Example: You pay \$5,000 for a bull and an injury occurs. He pounds out for \$1,200. You would receive a \$1,266 credit.

> RETAINED INTEREST:

We are retaining ½ revenue sharing semen interest in all bulls in the sale.

> DELIVERY AND BOARDING:

BULLS:

OPTION 1 – We will provide free keep on the bulls until April 15th and deliver them free within a 300 mile radius. For distances further than 300 miles bulls will be delivered at a fair price to central locations.

OPTION 2 - We will provide free keep on the bulls until June 1st if picked up from the ranch.

OPTION 3 - Receive a \$200 discount on any bulls picked up on sale day

FEMALES: Transportation for the open heifers and bred cows can be arranged with buyer responsible for delivery cost.

Special Speaker: Williams Druery Sr. Cattle Procurement Coordinator from Adams Land and Cattle will be speaking at 1pm!

A COMPLIMENTARY LUNCH WILL BE SERVED!

WE DEVELOP ATHLETES!

- Our bulls are developed in a pasture setting which allows for plenty of exercise.
- They are developed at a modest rate of gain which produces a bull ready for a long life of productive service.
- Our development pasture is lined with high tensile electric, which creates respect for other fences later in life.
- Bulls are backed by a two year breeding guarantee.

The Top Cut

Herd Bull Alert! Check out the spread on this stud going from a 72lb birthweight to the 2nd highest WW of the 2024 calf crop. He crushed his contemporaries every step of the way posting a 131 WR, a 125 YR, a 119 ADG ratio, a 130 IMF ratio, and a 109 REA ratio. His dam is doing a great job. It's no wonder when you look at the stats of his maternal grand dam X0156. She has averaged an incredible 97 birth ratio on 10 calves, and a 108 wean ratio on 10 calves. His maternal grand sire, Crump one of a Kind 7789, has been producing some awesome daughters for us. If you want power, performance and have it all backed up with a legendary cow family, here's your bull!

SIM ANGUS. Normally we sell our Sim-Angus bulls later in the sale, but we had to break the rules for this guy. This bull is an absolute power house, big boned, deep ribbed and square topped. His calves should be scale crushers with his impressive 120WR, and 124YR and top 1% WW and YW EPD. This bull also had a crazy 165 IMF ratio to give him the top IMF of the bulls offered in the sale. To top it all off he is one of the most gentle bulls in the pen. We would like to have this bull collected.

SITZ BARBARAMERE NELL 765D

LSF RR STACKED 2311Z
DAM: **LONE TREE BESSIE B056**
TLS BESSIE X0269

BLACK RED GENE. When we were breeding in 2022 I had two straws of Barricade left in the tank. We decided to use one on one of our best red cows. We wanted to use him for his ability to improve feet and conformation. His dam, B056, has been a maternal power house. She has averaged an impressive 109 weaning ratio on 8 calves, and a 106 yearling ratio on 5 calves. Black Jack is deep bodied with a strong hind quarter. He also has one of the best EPD profiles of the entire offering! We would like to have this bull collected.

Wow, what a flush! This group of bulls is out of a clone to the famous Black Cap May 4136 who has generated in excess of \$8.6 million in progeny sales. When combined with the #1 sire in the Angus breed, you end up with a powerful set of bulls. They are all deep, soft made with an added shot of length. Here's your chance to get some consistency and put these full brothers to work for you!

Commercial bulls don't normally make the sale but when there this good we had to make an exception. This guy has been catching our eye for along time. He was one of the biggest bulls at weaning time, all while coming into the world at only 71lbs. His commercial paternal sisters were some our favorites in the heifer pen.

LOT 66 - SAV MADAME PRIDE 2304

Due 4/1/24 to Millars Duke. We were able to purchase S A V Madame Pride 2304 back in the fall of 2022. She has absolutely blown us away with her embryo production, averaging 29 embryos per flush for her last 3 flushes. With over 140 embryos frozen for us last summer, we decided to offer her for sale. She is an eighth consecutive generation SAV embryo donor. 2304 has accumulated an impressive \$320,000+ in progeny sales! Her bull calves were the lead off sons of the SAV Circuit breaker sire group in the 2021 SAV sale.

TKP COMPLETE 2025 - SERVICE SIRE FOR LOTS 67-71

KJL/CLZB COMPLETE 7000E
SIRE: **TKP COMPLETE 2025**
RAISLAND ESTONIA 032-826

TKP Complete was our \$37,000 selection from the 2023 Pieper Sale. We think he is a great replacement for his famous sire Complete 7000E which is rare to find semen on now. He is a moderate framed dark red bull and will add a lot of style and eye appeal to your calves. Semen isn't plentiful yet so here is your chance to have some of the first calves out of this great bull.

Red Angus Guide to EPDS and Indexes

ProS... Profitability and Sustainability is an all-purpose index that predicts average economic differences in all segments in the beef supply chain. This index is a combination of the breeding objectives modeled in the HerdBuilder and GridMaster selection indexes. In this index, replacement heifers are retained from within the herd and all remaining progeny are fed out to slaughter and sold on a quality-based grid. Traits included in this index include calving ease, growth, HPG, STAY, Mature Weight, Dry Matter Intake and carcass traits. The resulting index is expressed in dollars per head born (Index/High Value).

HB HerdBuilder is a maternal selection index that predicts the economic differences of animals for traits that are important from conception through weaning. Expressed as dollars per head born, HB is calculated based on the scenario that bulls are mated to heifers and cows, replacement heifers are retained and all remaining progeny are marketed at weaning. Traits included in the HB index include Calving Ease Direct, Calving Ease Maternal, Weaning Weight, Milk, Mature Weight, Heifer Pregnancy and Stayability (Index/High Value).

GM..... GridMaster is a selection index that predicts the average economic difference of non-replacement calves through the post-weaning phase of production. GM places selection pressure on growth, feedyard performance and carcass traits. Expressed as dollars per head born, GM is calculated based on the scenario that progeny are fed out to slaughter and marketed on a quality-based carcass grid. Traits included in GM include Average Daily Gain, Carcass Weight, Dry Matter Intake, Marbling, Back Fat and Rib Eye Area (Index/High Value).

CED Calving Ease Direct predicts differences in the percent of calves born unassisted out of 2-year-old dams. (Percent/High Value)

BW Birth Weight predicts differences in actual birth weight of progeny. (Pounds/Low Value)

WW Weaning Weight predicts differences in 205-day weaning weight. (Pounds/High Value)

YW Yearling Weight predicts differences in 365-day yearling weight. (Pounds/High Value)

ADG Average Daily Gain predicts differences in weight gain between 205 and 365 days of age. (Pounds/High Value)

DMI Dry Matter Intake predicts differences in daily feed intake as measured in a feedlot during the post-weaning period. (Pounds/Low Value)

MILK Milk predicts differences in weaning weight attributed to the milking ability of the animal's daughters. (Pounds/High Value)

ME Maintenance Energy predicts the difference in maintenance energy requirements. (Mcal per Month/Low Value)

HPG Heifer Pregnancy predicts differences in the percent of daughters who are able to conceive and calve at 2 years of age following exposure to breeding. (Percent/High Value)

CEM Calving Ease Maternal predicts differences in the percent of daughters who are able to calve unassisted as 2-year-old heifers. (Percent/High Value)

STAY Stayability predicts differences in the ability of an animals' retained daughters to remain productive in the herd – calve every year – through 6 years of age. (Percent/High Value)

MARB Marbling predicts differences in marbling score – amount of intramuscular fat measured at the 13th rib. (Marbling Score Units/High Value)

YG Yield Grade predicts differences in USDA Yield Grade, which is calculated using CW, REA and Fat. (Yield Grade Units/Low Value)

CW Carcass Weight predicts differences in actual hot carcass weight. (Pounds/High Value)

REA Ribeye Area predicts differences in square inches of ribeye area measured at the 13th rib. (Square Inches/High Value)

FAT Fat predicts differences in the depth of backfat measured between the 12th and 13th ribs. (Inches/Low Value)

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I," and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. Accuracy will range from 0 to 1 with an accuracy closer to 1.0 indicating higher reliability. Accuracy is impacted by the amount of information that is included in the analysis including individual genotype and performance records as well as number of progeny and ancestral records.

PRODUCTION

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

Yearling Height (YH), expressed in inches, is a predictor of a sire's ability to transmit yearling height compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

MANAGEMENT

Claw Set (Claw), expressed in units of claw-set score, a lower EPD is more favorable, indicating a sire will produce progeny with more symmetrical, even and appropriately spaced toes compared to another sire.

Foot Angle (Angle), expressed in units of foot-angle score, a lower EPD is more favorable, indicating a sire will produce progeny with an angle closer to 45 degrees at the pastern and appropriate toe length and heel depth compared to another sire.

Docility (DOC), expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

Pulmonary Arterial Pressure EPD (PAP), expressed in millimeters of Mercury (mmHg), with a lower EPD being more favorable indicating a sire should produce progeny with a lower PAP score to decrease the risk of progeny contracting high altitude disease most commonly experienced at 5,500 ft or greater in elevation.

Hair Shed EPD (HS), expressed in units of hair shed score, with a lower EPD being more favorable. This indicates a sire should produce progeny who shed their winter coat earlier in the spring and has improved environmental adaptability in heat stressed areas and grazing endophyte-infected (hot) fescue.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

CARCASS

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Energy Value (\$EN), expressed in dollar savings per cow per year with a larger value being more favorable. It assesses differences in cow energy requirements, due to maternal milk and mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

PREMIUM CALF VALUE

Easy as 1-2-3

Want MORE for your steers?

THAT'S EASY ...

1. Purchase Top Dollar Angus-qualified bulls.
2. Raise Top Dollar Angus-qualified feeder calves.
3. Pocket MORE per head!

THE RESULTS:

Better performance and a documented \$84.26-per-head advantage as fed cattle!
The **PROOF** is in your bank account.

Steers & Heifers	Top Dollar Angus Qualified	Non-Qualified	Difference
Head Count	1,801	4,448	
Percentage of Head Count	29%	71%	
Average Daily Gain	4.28	3.99	0.29
Hot Carcass Weight	935	888	47
Marbling	504	471	33
Ribeye Area	15.4	15.2	0.2
Fat Thickness	0.66	0.61	0.05
Value Per Head	\$1,626.13	\$1,541.86	\$84.26

Top Dollar Angus has the necessary resources to provide third-party genetic verification of high-quality Angus and Red Angus-influenced feeder calves and females. Combining genetic verification with our extensive network of seedstock partners and feedyards allows Top Dollar Angus to deliver the unique ability of marketing assistance to our customers and truly connect people to people and people to profit.
